Office Action Summary	Examiner	Art Unit				
	Robert Beatty	2852				
The MAILING DATE of this communication app Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2852

1. Claims 4 are objected to because of the following informalities:

in claim 4, lines 3-4, the applicant claims "a predetermined period" which is unclear whether this is the same or different than the "predetermined time" in claim 1, line 3. See claims 10,21 and 27. Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-12,18-29 are rejected under 35 U.S.C. 102(a) as being anticipated by Umezawa et al. (JP# 2002-182470).

Umezawa teach (translation attached) a developing device comprising a developing roller 11, a toner supply roller 12, a seal member 15, and a toner regulating roller 14 arranged in contact with the developing roller to regulate the toner held on the developing roller. A plurality of developing devices 5Bk, 5C, 5Y, 5M can be pivoted into and out of engagement with a photosensitive belt 1 depending on whether a developing operation is to be performed. When a particular developing device is pivoted into engagement with the photosensitive belt to start a developing operation the developing roller will rotate in a counterclockwise direction to apply toner to the belt while the regulating roller 14 is locked in position. When it is pivoted away during a non-image forming operation, the

Art Unit: 2852

developing roller rotates in a clockwise manner while the regulating roller freely rotates therewith for a predetermined time period. During a non-image forming operation, the developing roller will not have any toner adhered thereto. The developing roller/regulating roller rotation can also occur at the determination of the start of powering up the printer (setup) or at a determination that the time between image formations (i.e. developing device not used) is longer than a predetermined time period (see paragraphs 50.51 and Fig. 6). It is contemplated to perform a reverse rotation subsequently followed by a forward rotation as a modification of the rotation of developing roller during a non-image formation period (see paragraphs 55-56). As described in paragraphs 52-54, upon inverse rotation (clockwise rotation) of the developing roller during a non-image operation, the developing roller does not rotate past point P2 (see Fig. 7) because if it did, it would scatter toner out of the developing device. Therefore the rotation of the developing roller during a non-image forming period is less than during a normal developing operation because of this limited rotation control.

3. Applicant's arguments filed 6/20/2006 have been fully considered but they are not persuasive.

Applicant amended the claims to include a mechanism to determined whether the developing device was new or unused for a predetermined amount of time which is still believed to be taught by Umezawa (JP) as explained above.

Art Unit: 2852

4. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert Beatty whose telephone number is (571) 272-2130. The examiner can normally be reached on M-F from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Gray, can be reached on (571) 272-2119. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Information regarding the status of an application may be obtained from the

Art Unit: 2852

Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
